FUNCTION: RECEPTOR FOR VEGF OR VEGF-C. HAS A TYROSINE-PROTEIN KINASE ACTIVITY. THE VEGF-KINASE LIGAND/RECEPTOR SIGNALING SYSTEM PLAYS A KEY ROLE IN VASCULAR DEVELOPMENT AND REGULATION OF VASCULAR PERMEABILITY (BY SIMILARITY).

CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                              tyrosine phosphate.
SUBCELLUALAR LOCATION: Type I membrane protein.
SIMILARITY: BELONGS TO THE CSF-1/PDGF RECEPTOR FAMILY OF TYROSINE-PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PEAM; PRO0047; 197. NiAlternate names: protein P2279; protein YPL174c
C;Species: Saccharomyces cerevisiae
C;Decies: 10-Dec-1994 #sequence_revision 31-May-1996 #text_change 05-Dec-1997
C;Accession: S65186; S34343
R;Benes, V.; Rechmann, S.; Nentwich, U.; Vobs, H.; Ansorge, W.
abubmitted to the Protein Sequence Database, May 1996
A;Reference number: S65183

Sequence 11, Application US/09847940B

Patent No. US20020156000A1

GENERAL INFORMATION:

APPLICANT: May, Michael J.

APPLICANT: Ghosh, Sankar

TITLE REFERENCE: PPI-117CP

CURRENT APPLICATION NUMBER: US/09/847,940B

CURRENT FILING DATE: 2001-05-02

PRIOR FILING DATE: 2000-08-22

NUMBER OF SEQ ID NOS: 27

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO !-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ; OTHER INFORMATION: Description of Artificial Sequence:NBD mutants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                     (without alignments)

```
The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB0725-ABB08725) comprising at least one NBMO binding domain (ABB773113). The compound has acts through selective inhibition of (ABB773113). The compound has acts through selective inhibition of Sylvahille (ABB773113). The compound has acts through selective inhibition of NBMO interaction results in inhibition of IKKOpeta kinase activation and subsequent decreased phosphorylation of IKKOpeta kinase activation and condition. The compound is useful in treating NF-kB mediated condition. Where compound is useful in treating NF-kB mediated conditions, where the condition is an inflammatory disorder. Alzaheimer's disease, transplant rejection, osteoporosis, cancer, Alzaheimer's disease, theorogeclerosis, a viral infection or ataxia telangiectasia. The inflammatory disorder is asthma, allergies, urticaria, anaphylaxis, cutaneous inflammation, sepsis, psoriasis, bowell disease, chronic obstructive pulmonary disease, visit and bursitis. The inflammatory disorder may also be dermatitis, osteoarthritis, psoriatic arthritis, lupus and bursitis. The inflammatory disease, ulcerative colitis, polymyalgia, scleroderma, Wegner's granulomary disease, ulcerative colitis, polymyalgia, scleroderma, Wegner's granulomatory viral infections cryoglobulinamena or multiple sclerosis. For chronic obstructive pulmonary disease, ulcerative anaphylaxis, drug and food sensitivity, contact dermatitis, crossed by Epstein-barr, cytomegalovirus or herpes simplex. Other diseases include HIV and influenza. The compound may also be dermatitied any application in which corticosteroids are used, including including including influenza and for dancer therapy. Also be dermatively or immunousppresession in th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antiinflammatory compounds and for diagnosis of an inflammatory disorder. The compound may be administered alone or in combination with other known anti-inflammatory agents. The present sequence is that of a mutated NEMO binding domain of IKKOeta.
                                                                                                                                                                                                                                                                         Modulating NF-kappaB induction in a cell, useful for treating e.g. inflammatory disorders, osteoporosis and cancer, comprises contacting a cell with an anti-inflammatory compound comprising at least one NEMO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 35; DB 23; Length 6; 100.0%; Pred. ```
The invention relates to an antiinflammatory compound (especially AAM48648), comprising a membrane translocation domain (AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48649), comprising a membrane translocation domain card residues, fused to a NEWO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, antipacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of Cytokine-mediated NFKappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of IKAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psortasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, caranulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis, viral infections; and ataxia telegical compounds are also useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48628-AAM48645), comprising a membrane translocation domain (AAM48629-AAM48646). The AAM48646-AAM48651) which comporises from 6-15 annino acid residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostactic, antipostriatic, antirheumatic, antiartitic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEWO binding domain that results in inhibition of IKKappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lumg inflammation or cancer, bowel disease, sepsis, vasculitis, osteoparchitis, inflammatory bowel disease, sepsis, vasculitis, osteopachitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomacosis, multiple sclerosis, transplant rejections, osteoporosis, telangiectasia. The compounds are also useful for treating telangisctasis, transplant rejections, and ataxia telangiectasis. The compounds are also useful for treating profit or screams, and profit architistic, disease; atherosclerosis, viral infections, osteoporosis, architist, end sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                         Antinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; definition of the manatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimar's disease; atherosclerosis; viral infection; ataxia telangiectasis; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Phillips K;
                                                                                                             Anti-inflammatory peptide SEQ ID NO 42.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 6; Page 61; 88pp; English.

The NEMO binding domains are found on Ikapaba Kinase-beta (IKKDeta) and IkappaB kinase-alpha (IKKAlpha) proteins. The antiinflammatory compounds of the invention are useful for modulating nuclear factor-kappaB (NF-kappaB) induction in a cell, where the compounds are capable of blocking the interaction between one or more IKKs such as IKKalpha or IKKbeta, and NEMO. The antiinflammatory compound further comprises at least one membrane translocation domain. The compounds are useful for treating
                                                                                                                                                                                                                                                                                                                                                                 IkappaB kinase-beta; IkappaB kinase-alpha; IKKalpha; NF-kappaB; muclear factor-kappaB induction; inflammatory disorder; autoimmune disease; osteoporosis; cancer; Alzheimer's disease; atherosclerosis; viral infection; Ataxia telangiectasia; transplantation detection; immunosuppressive; osteopathic; cytostatic; nootropic; neuroprotective; antiatherosclerotic; virucide; vasotropic; antirheumatic; antiatherosclerotic; virucide; vasotropic; antirheumatic; antiatherosclerotic; virucide;

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain cham48620-AAM48645). The AAM48651 which comprises from 6-15 amino acid residues, tused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antiporiatic, antirheumatic, antiarthric, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, notropic, antiatherosclerotic, virucide and antiallergic activity. The compounds acr as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IrappaB kinase beta (IKKbeta kinase the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psociasis, rheumatoid arthritis, osteoporosis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating anaphylaxis, pro-inflammatory responses such as allergies, urticaria, anaphylaxis,

                                                                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an antiinflammatory compound (especially AMM48628-AMM48645), comprising a membrane translocation domain (AAM48628-AMM48647) or CAM486519 which comprises from 6-15 (AAM48620-AMM48647) or AAM48646-AAM486519 which comprises from 6-15 compounds acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated Nktappa compounds act as selective inhibitors of cytokine-mediated Nktappa the NEMO binding domain that results in inhibition of IKKDeta kinase activation and subsequent decreased phosphorytation of IKKDeta kinase compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis,
                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; derivatedological; heuroprotective; antiatheroselerotic; antiallerotic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
or food sensitivity, eczema, dermatitis, sunburn, aging and

The antiinflammatory compounds have antiasthmatic, cytosteatic, antipsoriatic, antirhenmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The
osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gape

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antirheumatic; antiarthritic; oeteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NEKappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, autoimmune diseases such as lupus, polymyalgia, scleroderma, pursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis, Alzheiner's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and

(Gyrogatic, antipsoriatic, antilintenametry, compounds.)

(cytostatic, antipsoriatic, antilintenametry, cytostatic, antipsoriatic, dermatological, neuroprotective, concourage activity. The compounds act as selective inhibitors of cytokine-mediated NRkappaB activation by blocking inhibitors of IkappaB kinase beta (IKKbeta) at the NEWO binding domain that results in inhibition of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, inflammation or cancer, psoriasis, rheumatory disorders, e.g. asthma, lung inflammatory bowel disease, sepsis, vasculitis, osteonathritis, inflammatory bowel disease, such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease, atheroselezosis; viral infections; and atexia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, arcitical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease, atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
(AAM48620-AMM48627 or AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

The invention relates to an antiinflammatory compound (especially AM48629-AM48645), comprising a membrane translocation domain (AAM48629-AM48645), comprising a membrane translocation domain acid residues, tused to a NEMO binding sequence (AAM486519). The antiinflammatory compounds have antisathmatic, cytostatic, antipacratic, antiinflammatory compounds are antisathmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappas activation by blocking interaction of Ikappas kinase beta (IKAbeta kinase activation and subsequent decreased phosphorylation of IKAppas The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoderma, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, grannlomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory resources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclarotic; antiallergic; membrane translocation domain; MEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatorid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;
                                                                              Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    drug or food sensitivity, eczema, dermatitis, sunburn, aging and

                                                                                         The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48629-AAM48645), comprising a membrane translocation domain (AAM48629-AAM48629). The AAM48651 which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, antibacterial, immunosuppressive, dermatological, neuroprotective, notropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFKappaB activation by blocking interaction of IkappaB kinase beta (IKKObeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, ung inflammation or cancer, psoriasis, rheumatoid arthritis, osteopartsis, inflammatory bowel disease, sepsis, vasculitis, decentable in the selection; osteoporosis; deranglacterial, and therosclerosis; transplant rejection; osteoporosis; Alzheimer's disease, abhorosclerosis, viral infections; and ataxia continuation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;

AMM48620-AMM48645) comprising a membrane translocation domain (AAM48620-AMM4861) comprising a membrane translocation domain (AAM48620-AMM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antiposciatic, antirheumatic, antiarthritic, osteopathic, antiabacterial, immunosuppressive, dermacological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds act as selective inhibitors of cytokine-mediated NFkappaB cutivation by blocking interaction of IkappaB kinase beta (IKKObeta) at the NEWO binding domain that results in inhibition of IKKOpeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatoin of IkappaB. The compounds are useful for treating inflammatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, constantial compounds are also useful for treating inflammatomic sections; and ataxia treating constant constant of the compounds are also useful for treating constant constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the compounds are also useful for treating constant of the constant of the constant of the constant of the constant of the cons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pro-inflammatory responses such as allergies, urticaria, anaphylaxis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to an antiinflammatory compound (especially

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteopporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      amino acid residues, fused to a NEMO binding sequence (AAM488525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antinheumatic, antiartheumatic, antiartheumatic, osteopathic, antibacterial, immunosuppressive, dermacological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         activation and Subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autosimune diseases such as lupus, polymyalgia, selezroderma, granulomatosis, multiple selezosis; transplant rejection; osteoporosis; Alzheimer's disease, atherosclerosis; viral infections, and ataxia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                               domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAM48620-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48627 or AAM48646-AAM48651) which comprises from 6-15
                                                                                                                                                                                                                                                                                                              Novel antiinflammatory compound comprising membrane translocation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention relates to an antiinflammatory compound (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .,

AMM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48619). The antiinflammatory compounds have antiasthmatic, ortostatic, antiaporiatic, antiinflammatory compounds have antiasthmatic, ortostatic, antiathersoclerotic, antiathersoclerotic, virucide and antiallargic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds act as selective inhibitors of cytokine-mediated NFkappaB compounds act us selective inhibitors of cytokine-mediated NFkappaB compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatory disorders, e.g. asthma, compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatory disorders, e.g. asthma, costeoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's diseases atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, archivity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The invention relates to an antiinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48620). Comprising a membrane translocation domain characteristic and residues, fused to a NEMO binding sequence (AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antiporalatic, antiheumatic, antiarthritic, osteopathic, contropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NRRappas compounds act as selective inhibitors of cytokine-mediated NRRappas compounds are useful for treating inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKbeta kinase activation and subsequent decreased phosphorylation of IKKppas The activation and subsequent decreased phosphorylation of IKKppas The activation and subsequent decreased phosphorylation of IKKppas (Inng inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; viral infection; osteoaporosis; celangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, are allergies, urticaria, anaphylaxis, and an activity, eczema, dermatitis, sunburn, aging and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò

C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 02-Jun-2000 #sequence_revision 02-Jun-2000 #text_change 02-Jun-2000
C;Accession: T49089
R;Alcaraz, J.P.; Clabault, G.; Cottet, A.; Mache, R.; Mewes, H.W.; Rudd, S.; Lemcke, Submitted to the Protein Sequence Database, April 2000
A;Reference number: Z25015
A;Accession: T49089
A;Status: preliminary
A;Molecule type: DNA
A;Molecule type: DNA
A;Residues: 1-763 <ALC>
A;Cross-references: EMBL:ALO49711; GSPDB:GN00061; ATSP:F4F15.210

C;Species: Salmonella enterica subsp. enterica serovar Typhi
A;Note: this species has also been called Salmonella typhi
A;Note: this species has also been called Salmonella typhi
C;Accession: AH0937
B;Parkhill, J; Dougan, G;; James, K.D; Thomson, N.R.; Pickard, D.; Wain, J.; Churcher, R;Parkhill, J; Dougan, G;; James, K.D; Thomson, N.R.; Pickard, D.; Wain, J.; Churcher, K.J. Connerton, P; Cronin, A; Davis, P; Davies, R.M.; Dowd, L.; White, N.; Farrar, S.; Moule, S.; O'Gaora, P.
Nature 413, 848-852, 2001
A;Authors: Parky, C.; Quail, M.; Rutherford, K.; Simmonds, M.; Skelton, J.; Stevens, K., A;Attle: Complete genome sequence of a multiple drug resistant Salmonella enterica seron, A;Reference number: AB0502; MUD:21534947; PMID:11677608
A;Accession: AH0937
A;Accession: AH0937
A;Accession: AH0937
A;Molecule type: DNA

A.Rote: residues 2-15 were confirmed by protein sequencing
C.Comment: This enzyme catalyzes the carboxylation (by carbon dioxide) of phosphoenolpyz
C.Comment: The activity of this protein is not stimulated by acetyl-CoA in the absence c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        мау мЈ,
   ceramplectasis. The intramancory disorder is ascense, allogises, cuticaria, anaphylaxis, cutaneous inflammation, sepsis, psoriasis, cheumatoid arthritis, osteoarthritis, psoriatic arthritis, inflammatory bowel disease, vasculitis and bursitis. The inflammatory disorder may also be dermaticis, eccema, psoriasis, osteoarthritis, psoriatic arthritis, lupus and sporiasis, crowdylarthritis. Also for Crohn's disease, ulcerative colitis, polymyalgia, scleroderma, Wegner's granulomatosis, temporal arteritis, cryoglobulinaemia or multiple sclerosis. For chronic viral infections caused by Epstein-barr, cytomegalovirus or herpes simplex. Other viral infections caused by Epstein-barr, cytomegalovirus or herpes simplex. Other infections cused by Epstein-barr, cytomegalovirus or herpes simplex. Other viral infection anaphylaxis, drug and food sensitivity, contact dermatitis sumburn or aging. The compound may be used to replace corticosteroids in impunchangession in transplants and cancer therapy. Also for identifying antiinflammatory compounds and for diagnosis of an inflammatory disorder. The compound may be administered alone or in combination with other known anti-inflammatory agents. The present sequence is that of a mutated NEMO binding domain of IKKbeta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB08725-ABB08742) comprising at least one NEWO binding domain (ABB77313). The compound has acts through selective inhibition of cytokine-mediated NF-kB activation by blocking the interaction of NEMO with IKKbeta at the NEWO binding domain. Blockage of IKKbeta-NEWO interaction results in inhibition of IKKpeta kinase activation and subsequent decreased phosphorylation of IKAppaB. The compound may also act (directly or indirectly) by blocking the recruitment of leukocytes into sites of acute and chronic inflammation, by down-regulating the expression of E-selectin on leukocytes or by blocking osteoclast differentiation. The compound is useful in treating NF-kB mediated conditions, where the condition is an inflammatory disorder, an autoimmune disease, transplant rejection, osteoporosis, cancer, altabalmer's disease, atherosclerosis, a viral infection or ataxia telegals.
                                                                                                                                                                                                                                                                                                                          Modulating NF-kappaB induction in a cell, useful for treating e.g. inflammatory disorders, osteoporosis and cancer, comprises contacting a cell with an anti-inflammatory compound comprising at least one NEMO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 33; DB 23; Length 6; 100.0%; Pred. The invention relates to an antiinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48620) comprising a membrane translocation domain (AAM48620-AAM48620). The AAM48651) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, notropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NEKappa crivation by blocking interaction of Ikappas kinase beta (IKKbeta kinase activation and subsequent decreased phosphorylation of Ikappas. The compounds are useful for treating inflammation of Ikappas. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, britanian diseases such as lupus, polymylajdia, scleroderma, contropication and subsequent diseases such as lupus, polymylajdia, scleroderma, contropication and diseases such as lupus, polymylajdia, scleroderma, contropication and concer, psoriasis, polymylajdia, scleroderma, contropication and concernation and contropication and concernation and concernation and concernation and contropication and concernation concernation and concernation concernation concernation concernation concernation concernation concernation concernation concerna
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    granulomatosis, multiple sclerosis; transplant rejection; osteoporosis;
Alzheimer's disease; atherosclerosis; viral infections; and ataxia
telangiectasia. The compounds are also useful for treating

sequences from the Corpusform bacterium Corpusbacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of corpuseform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from corpusform bacterium, corpusform bacterium, corpusform bacterium, corpusform bacterium, corpusform bacterium corpusform bacterium corpusform bacterium of a gene derived from corpusform bacterium, corpusform bacterium of a gene derived from corpusform bacterium, corpusform bacterium of panel for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides a number of nucleotide and protein
                                                                                                                                     amino acid synthesis; vitamin; saccharide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to antiinflammatory compounds comprising NEMO binding domain (NBD) peptides. The NEMO binding domains are found on IkappaB kinase-beta (IKKbeta) and IkappaB kinase-beta (IKKbeta) and IkappaB kinase-beta (IKKbeta) and IkappaB kinase-beta (IKKB) publication are useful for modulating nuclear factor-kappaB (NF-kappaB) induction in a cell, where the compounds are capable of blocking the interaction between one or more IKKB such as IKKalpha or IKCbeta, and NEMO. The antiinflammatory compound further comprises at least one membrane translocation domain. The compounds are useful for treating inflammatory disorders, autoimmune diseases, osteoporosis, cancer, inflammatory disorders, autoimmune diseases, osteoporosis, ktaxia telangiectasis, and for transplantation detection. The compounds of the invention block NF-kappaB induction by IKK but do not inhibit the basal activity of NF-kappaB. ABU08418-ABU08432 represent human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB00725-ABB00742) comprising at least one NRMO binding domain (ABB07313). The compound has acts through selective inhibition of NEMO (STC) at the NEMO binding at least one NEMO binding domain. Blockage of IKKbeta-NEMO interaction results in inhibition of IKKbeta hisses activation and subsequent decreased phosphorylation of IKKbeta hisses activation and subsequent decreased phosphorylation of IKKbeta herocompound may also act (directly or indirectly) by blocking the recruitment of leukocytes into sites of acute and chronic inflammation, by down-regulating the expression of B-selectin on leukocytes or by blocking osteoclast differentiation. The compound is useful in treating NP-kB mediated conditions, where the condition is an inflammatory disorder, an autoimmune disease, transplant rejection, osteoporosis, cancer, alteriaria, anaphylaxis, cutaneous inflammatory disorder, and cuticaria, anaphylaxis, cutaneous inflammatory disease, vasculitis, boriasis, osteoarthritis, osteoarthritis, psoriatic arthritis, inflammatory conditions, where the inflammatory disorder is activative colitis, conditions, osteoarthritis, psoriatic arthritis, lupus and bursitis. The inflammatory disorder may also be dermatitis, inflammatory polymyladia, osteoarthritis, psoriatic arthritis, lupus and colymylarthritis. Also for Crohn's disease, ulcerative colitis, cryoglobulinaemia or multiple sclerosis. For chronic viral infections caused by Epstein-barr, cytomegalovirus or herpes simplex. Other viral classases include HIV and influence and solve ensettions are entitied cutaning anaphylaxis, drug and food sensitivity, contact dermatitis, may also be useful for traating anaphylaxis, drug and food sensitivity, contact dermatitis, may also be useful for in which corticosteroids are useful dermaticies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunosuppression in transplants and cancer therapy. Also for identifying antinflammatory compounds and for diagnosis of an inflammatory disorder. The compound may be administered alone or in combination with other known anti-inflammatory agents. The present sequence is that of an IKKbeta mutant, useful in examples of the invention.

Note: The present sequence is not given in the specification but is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modulating NF-kappaB induction in a cell, useful for treating e.g. inflammatory disorders, osteoporosis and cancer, comprises contacting cell with an anti-inflammatory compound comprising at least one NEMO
                                                                                                                                                                                                                                                                         Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 11; Page -; 82pp; English.

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatorropic; vulnerary; antiparkinsonian; noctropic; neuroprotective; costeopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; cosqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermator to, or preventing or treating the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the proteins and nucleic acids may be used to treat cancers; proliferative disorders, neurodegenerative disorders, osteoarthritis, concliferative disorders, neurodegenerative disorders, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antilifiammatory disease; to enhance consultation; to inhibit thrombosis; and as a contraceptive.
Human; open reading frame; ORFX; detection; cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppensant; cardiant; immunostimulant; thrombolytic; antiantentic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; antidiabetic; antianaemic; gene therapy; cancer; proliferative disorder; hypotrension; antianaemic; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; eholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuia; burn; wound; bone damage; cartilage damage; antinflammatory disease; coagulation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   90.9%; Score 30; DB 21; Length 119; 83.3%; Pred.
